**ABLOY® EL560, EL561, EL562, EL563**

High security DIN standard handle controlled lock for wooden and metal doors

**Product description**

High security locks EL560/561/562/563 are used especially in situations where the advantages of handle-controlled unlocking have to be combined with the mechanical security requirements. The integrated monitoring contacts from the lock can be connected to the different systems.

When door closes, dead bolt is thrown out automatically, double action latch is blocked and the lock case is secured in two points.

The exit side settings (EL560/562) and selecting between fail-locked and fail-unlocked can be performed on the lock as required.

**EL560/562 with split spindle function**

Outside handle is engaged electrically, e.g., by electric access control. By pressing engaged handle, dead bolt is retracted and double action latch released.

Inside handle opens lock mechanically (exit function), no need for electric control.

**EL561/563 with straight spindle function**

Both handles are engaged electrically e.g., by electric access control. By pressing engaged handles, dead bolt is retracted and double action latch released.

**Overview of Advantages**

- Mechanical automatic locking system
- Non handed, left / right
- Exit side can be changed over *
- Can be changed between fail-unlocked & fail-locked
- Burglary-resistant due to dead bolt with 20 mm throw
- Exit function by inside handle *
- Suitable for fire doors
- Controllable outside handle *
- Mechanical override with cylinder
- Monitoring functions
  - Door status
  - Handle down
  - Bolt deadlocked
  - Bolt in
  - Key cylinder used
  - Sabotage loop

**Scope of delivery**

- 1 pcs lock case
- Operating manual

Ordered separately

- Strike plate (e.g. EA324)
- Cable EA218 (6m) / EA219 (10m)
- Lead cover EA280/281
- Handle set (e.g. EH006/042) and spindle
- Split spindle EA288/289 with EL560/562
- Cylinder(s) (e.g. CY321T)
