

ABLOY® NOVEL

INDUSTRIAL LOCKS, KEY DEPOSITS AND RIM LOCKS

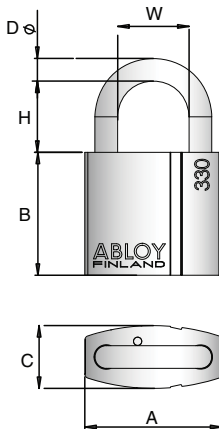

PADLOCKS

ABLOY® padlocks have been the market leader for decades due to their unique ability to provide high security locking in severe environmental conditions. Based on independent lab test results **ABLOY®** padlocks continued to operate smoothly even after being subjected to some of the toughest corrosion tests. Durable materials such as hardened boron steel provide superior protection against drilling, sawing, cutting, twisting or shimming.

ABLOY® padlocks meet and or exceed the requirements of the EN 12320 padlock standard.

All **ABLOY®** NOVEL padlocks contain 11 discs for extensive keying combinations. They are all key retaining: key removable in locked position only. Both the bodies and shackles are bright chrome plated.

For more information see the general **ABLOY®** padlocks brochure no.8801400 and no.8801401 (technical brochure) at www.abloy.com

ABLOY® NOVEL lock contains 11 discs for extensive keying combinations. Body material is brass. A wide range of cams is available.

CL103U

- Cam turn 90°/180°
- Key removable in locked position only

CL103U

KEY DEPOSITS

ABLOY® key deposits are commonly used for storing route keys to apartment complexes, office buildings and factories. Route keys can be of use to utility companies such as electricity, telephone, gas or cable TV companies as well as fire departments.

Route keys limit service people to access only those rooms where their equipment is installed. It also allows for the

convenience of only having to carry one single key which can operate thousands of key deposits.

The **ABLOY®** key deposits' cylinders allow each company to have their own unique key combination. The cylinder can be ordered as keyed to differ, keyed alike or master keyed.

CONSTRUCTION

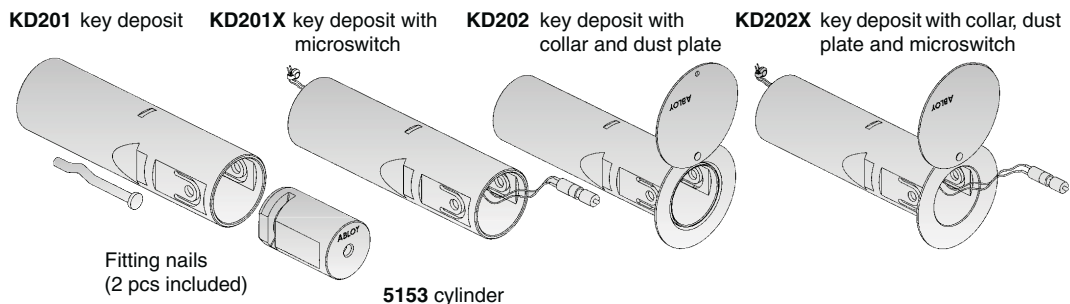

Key deposit housing	Steel
Cylinder housing	Hardened steel
Cylinder drum	Brass
Discs and washers	Tin bronze
Number of discs	11

FINISHES AVAILABLE

Satin Chrome (cylinder)
Zinc Plated (deposit housing)

MODELS AVAILABLE
