

KENTIX

ASSA ABLOY

Physical security for your digital world

Secure data center and critical infrastructure easily

Ingenious. 8-in-1. KentixONE.

Eight systems in one physical security platform

In a world where companies increasingly depend on reliable IT, failures, security breaches, and unexpected disruptions are not only annoying, but also critical business risks. Data centers, server rooms, and networked infrastructure must therefore not only be protected, but also proactively monitored—before damage occurs. Kentix makes this possible.

Kentix combines Physical security, monitoring, and smart building technologies in a single, intelligent platform.

Access control

Not just knowing who - when - where, but grant and withdraw access authorizations in real time and from anywhere.

Intrusion alarm

Immediate alarm in the event of a break-in or attempted break-in also offers effective deterrent.

Video surveillance

Everything in view at all times with live video monitoring in real time. If an event is triggered, the camera records automatically and alerts the system.

External fault reports

As part of infrastructure monitoring the recording of fault messages from external systems provides even more security.

Environmental monitoring

Continuous monitoring of the prescribed environmental reliability standards prevents quality losses.

Early fire detection

Fires are a major risk for organizations with lots of IT. Early risk monitoring helps stop them before they happen.

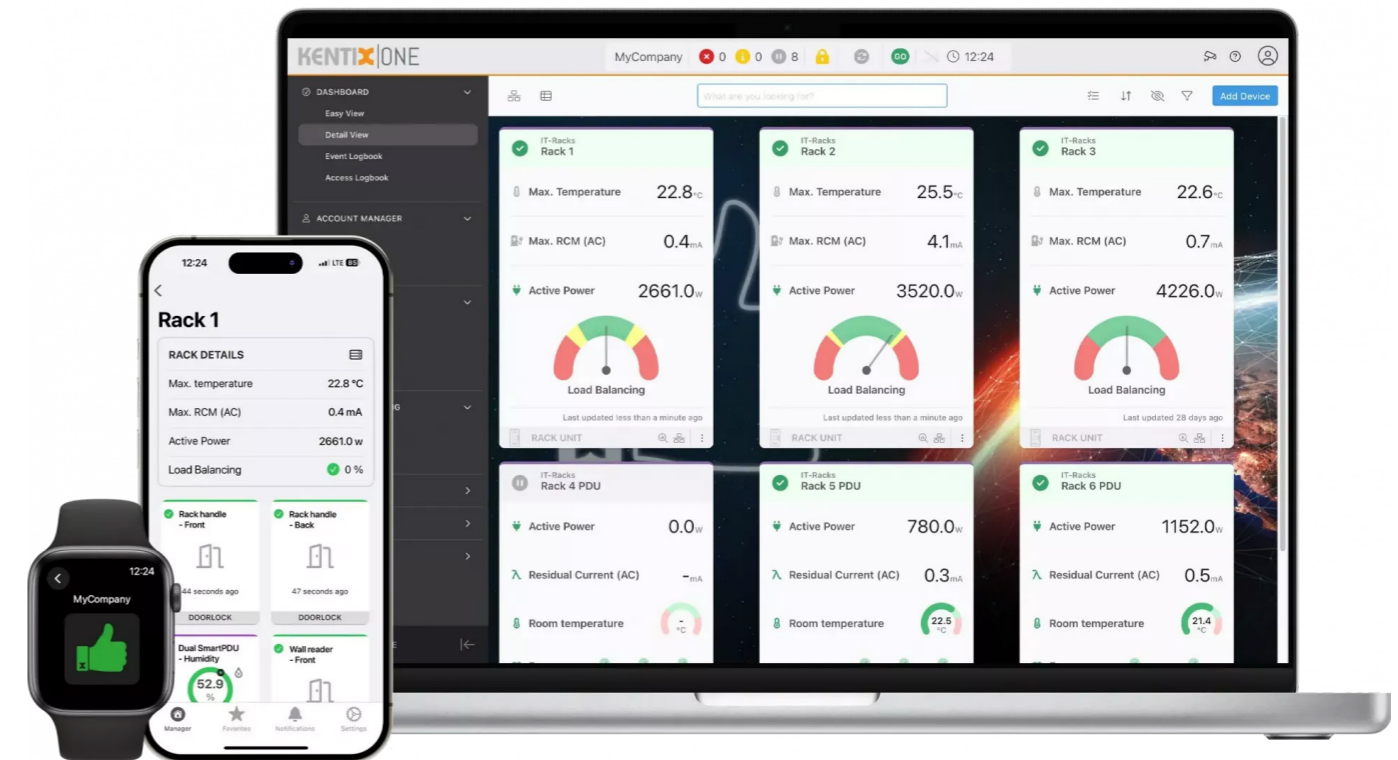

Power monitoring

Malfunctions, interruptions or total failures are prevented thanks to real-time energy conditions.

Network monitoring

Continuously monitors the devices in the network and identifies errors before they become a serious threat.

KentixONE: Monitor and protect critical infrastructure and data center

**Certified
EN 50600**

A unified software platform designed to secure both critical infrastructure and modern IT environments. KentixONE enables compliance with standards such as NIS-2, CER, ISO 27001 and EN 50600 while continuously monitoring physical risks and operational conditions. By combining multiple monitoring functions in one system, it simplifies infrastructure protection and improves reliability.

- **Secure:** 100% IoT – local and scalable – fully integrated
- **Convenient:** System status always available via the app
- **Compliant:** Certifiable according to EN 50600
- **Innovative:** Detect risks before they become a threat to your operations

The benefits of KentixONE

- Seamless integration with your IT – on-premise as a hardware appliance or Docker container
- Manage multiple functions from a single interface for greater efficiency
- 8-in-1 system monitors over 40 hazards for maximum safety
- All information available anytime, anywhere via app
- Open interfaces for maximum compatibility with new or existing systems
- Unlimited scalability – even for distributed infrastructures
