The Bloomsbury Institute delivers a lesson in secure access control with ASSA CLIQ® Remote

Challenge

Company: The Bloomsbury Institute
Segment: Education
Property type: Higher education institution
Location: Central London

One of the UK's top business and management schools, the Bloomsbury Institute delivers full-time undergraduate and postgraduate courses in business, accounting, finance and law, which are awarded by the University of Northampton.

Formerly the London School of Business and Management, the Bloomsbury Institute has to contend with a high turnover of students each academic year, as well as any changes to staff. The sheer number of people using the Institute's buildings meant that its existing mechanical master key system was simply no longer feasible, unable to provide adequate protection for areas that might hold sensitive information, such as exam scripts.

As a result, the Bloomsbury Institute needed a flexible access control system that would be easy to maintain, granting secure access to individuals as and when needed, while delivering greater key control too.

Solution

The answer was ASSA CLIQ® Remote, which has been installed throughout the Bloomsbury's Institute's 7 Bedford Square teaching site, and selected areas within the institute's 99 Gower Street building.

The Bloomsbury Institute can now programme and update each key remotely, removing or granting access privileges for the key holder in real time.

ASSA CLIQ® Remote also provides a full audit trail for assured peace of mind, and has the functionality to create time-defined user keys, only allowing access to an individual for a specified period of time.

"Using ASSA CLIQ® Remote could not be easier. It is saving us countless hours of key cutting and changing cylinders, while significantly improving our key control.

"The service from ASSA ABLOY Opening Solutions has been outstanding. The company really made the effort to understand our business and its requirements. During the implementation phase, ASSA ABLOY Opening Solutions provided comprehensive training on how to use the system to all staff that have administration rights, while working with our IT team to ensure the systems' software is uploaded onto their machines.

"The best part of the service has been having a dedicated contact that has been onboard since the start, providing us with new updates, support and guidance. This part of the service is proving to be of great value, filling us with confidence to continue using ASSA ABLOY Opening Solutions products in the future."

Stephane Middleton, Estates & Facilities Manager at the Bloomsbury Institute
