

Security Solutions, Protecting Your Assets

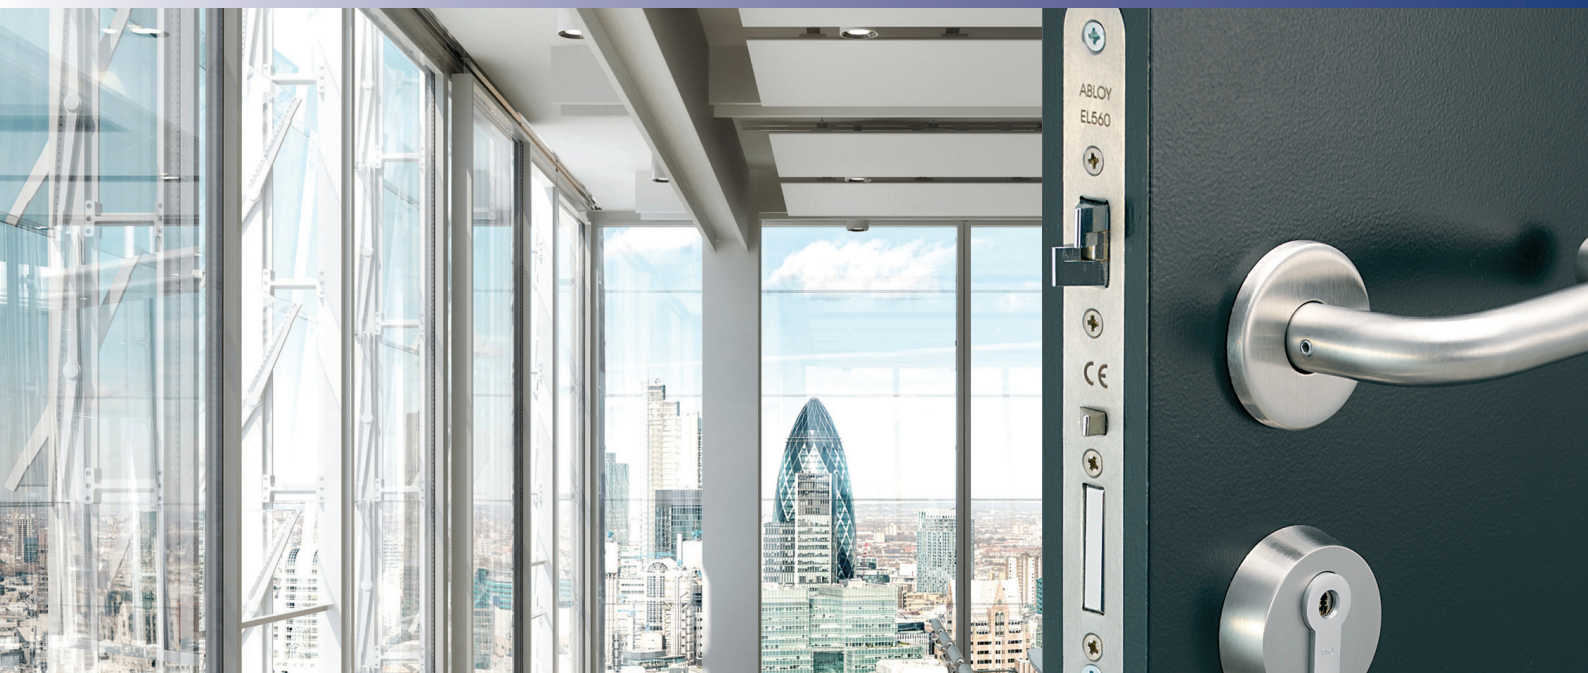

Safety, Security and Escape

- Are you sure only authorised people can access restricted areas?
- Can you remain secure and enable escape during a power failure?
- In the event of Dynamic Lockdown, can you segment areas in buildings to prevent access, and still enable escape?
- Are your fire and escape doors compliant to Building Regulation standards?

ABLOY Solutions

- ABLOY Electric Locks are tested and compliant to fire and escape standards BS EN 179, BS EN 1125, BS EN 13637 and they integrate with your existing access control systems.
- Abloy Locks support Dynamic Lockdown protocols, enabling escape and restricting access without compromising safety and security.
- Abloy Locks help you achieve Corporate Sustainability Objectives – unlike magnetic locks, they only use power when operated.
- Abloy Locks provide security and allow escape, even in the event of a power cut.

Proven solutions for your high security needs

Security begins with the protection of your people, assets and property.

With the increase in emerging threats priority is often focussed on the prevention of cyber-attacks, and physical security can be seen as a lower priority.

But risks exist not just from hackers and terrorists; provision for minimising the spread of fire and smoke and providing a means of escape in the event of an emergency is your legal responsibility. Our mission is to meet these challenges with complete locking solutions for the 21st century. ABLOY products are recognised and trusted as the premium high security locking solutions, chosen around the world to protect critical infrastructure.

For over 110 years ABLOY has developed expertise and innovated so we can design a system that is right for virtually any environment, and we have achieved the highest industry accreditations, standards and stringent physical attack tests.

To request a risk assessment contact our Head of CNI, Steve Wintle,
