Medical institutions all over Europe trust Aperio®

"Aperio® from ASSA ABLOY provided a modern solution and a high level of security for a reasonable price."

Roman Paveza, Head of the Centre of Information Technologies

Hospital Maria Middelaes Ghent and Gentbrugge, Belgium

A modern hospital demands flexible, modern, secure access control, around the clock and 365 days a year. At Ghent's new Hospital Maria Middelaes, ASSA ABLOY delivered just that. Aperio® wireless locks now protect patients and confidential patient data, as well as medicines and other valuable hospital equipment.

"Hospital staff were looking for a solution that was easy to use. The Aperio® wireless solution ensures a very high level of security, while providing customisable control as needs change."

David Geiswiller, Access Control Sales Manager at ASSA ABLOY France

CHU de Grenoble Grenoble, France

The Centre Hospitalier Universitaire (CHU) de Grenoble occupies a site that's open to the city and its people. It has no enclosing walls. Even the city tram passes between its buildings. With so many people on the premises each day, theft of hospital property had become widespread. With Aperio® wireless access control from ASSA ABLOY, the immediate result was to drastically reduce theft from the premises. CHU's 7,800 employees needed reassurance that their belongings, as well as those of visitors, were well protected.

"Aperio® escutcheons proved to be the most cost-effective and easy-to-install security solution for the hospital."

Sue McIntyre, General Manager, Grantfen

Aintree University Hospital Liverpool, England

Aintree University Hospital is a major teaching hospital and health provider in North Merseyside, providing acute medical care to around 330,000 local residents. As part of a £35 million refurbishment of A&E and other urgent care services, the hospital trust sought an upgrade to its access control system. Aperio® offered a straightforward alternative to a complicated wired solution, without any need to modify the doors thanks to the battery-powered escutcheons.

How do you provide public access and protect patients and staff?

Wireless access control is your cost-effective solution.

Cost reduction

Save installation, management, operational and maintenance costs

You have thousands of people pass through your doors every day. You also have a duty of care like almost no other industry. Securing all this starts with something as simple as the door lock. You need to know who has access where, when they enter and leave, and when they no longer need access.

Aperio® is a wireless access control solution that's quick to install and easy to manage. You make large cost savings on installation, maintenance and power consumption. More importantly, you gain the sophisticated security capabilities you need to keep your hospital safe.

Aperio® wireless locking technology meets the security and budget requirements of the modern hospital.

Avoid theft

Secure critical assets, like medicals, drugs, patient documentation or lab equipment

Access control

Provide different group of users with local or temporary access rights

Easy to manage

Central management of all wireless connected doors within the hospital

Easy to use

Give staff multi-door and room access from a single card

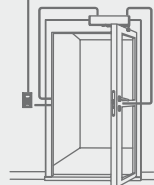

Certified security

Aperio® devices are certified and compliant with EN and EU security standards

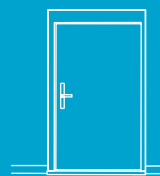

Expand your access control system with cost-effective Aperio® wireless integrated doors
