

# Communal Garden in Kensington secures access control with CLIQ® Go from ABLOY

# Kensington Communal Garden

Abloy UK and security company Barry Bros Security have supplied and installed a CLIQ® Go electronic cylinder solution to a communal garden in Kensington, London to provide its residents with reliable and secure access

The garden's previous access control systems had proven to be unreliable, at times allowing members of the public unauthorised access which highlighted security risks. The original key-operated system had allowed previous residents to maintain access even after they had moved away from the area whilst the fob-operated system that replaced it had not proved weather resistant.

Located in an enclosed area, the garden is secured with an external gate that is fully exposed to the elements. The resident committee required a durable locking solution to cope with such conditions, with the technology to control multiple access requirements; to allow resident's access to the gardens, and a team of contractors and committee members with higher access permission to enter the internal compound to enable maintenance of the gardens.

Sam Moxey, Technical Sales and Project Manager at Barry Bros Security, one of London's longest serving security companies, specified the new CLIQ® Go electronic cylinder solution from Abloy as the ideal technology to cope with the ever-changing access control requirements.

The CLIQ® Go App moves security to a new dimension, enabling controlled security from a mobile device and the ability to easily revoke access permission of non-resident individuals.

Features include the ability to schedule access to areas and to provide contractors with time-limited access. If a key is lost, access can also be revoked using the CLIQ® Go App, all managed from a cloud-based system.

The system has been installed for six months with excellent feedback from the committee and residents. Comments emphasise the robustness of the system, its ease of use and the savings achieved because of the reduced number of locksmith callouts.

Sam Moxey, Barry Bros Security, said, "I wanted to ensure that the solution we specified would perform as required and finally resolve what had become an ongoing issue for the committee. Having worked with Abloy UK for a number of years, I had no hesitation in recommending CLIQ® Go. It was very easy to set up and the programming of the CLIQ® Go locks and keys was achieved easily, fitting with my busy workload".
