

Security Solutions for Universities

ASSA ABLOY

Experience a safer
and more open world

Providing a safe, secure learning environment

Universities are diverse environments, rich with cultures and groups with an increasing need for new facilities and services.

As University Campus's continue to evolve, ASSA ABLOY stands alongside the leaders, delivering a safe and secure environment for all parties across the estate.

As trusted advisors to the University community, we can provide comprehensive advice relating to locking and access solutions, compliance legislation and building standards, as we help the campus meet technological and physical requirements. Our aim is to work with your University team in delivering the highest academic standards along with a safe and secure student experience, for today and into the future.

We understand your challenges

Safe and secure environment

We give you the capability and flexibility to control access while retaining convenience at your premises.

Full time staff, students, guest speakers and temporary contractors can be given access specifically for the areas required, including campus resources, cabinets, lockers, lifts and even car parks. Daily and contract time limitations can be conveniently set for each individual.

Where staff and students use lockers, they can have personal keyless access which can be changed digitally when they leave. No more lost keys!

Customised solutions can be provided for secure rooms and buildings.

Sustainability through safety and free movement

Reduced energy use and avoiding the depletion of natural resources through innovative design and deployment are just two of the methods ASSA ABLOY draw upon to help Universities maintain an ecological balance in pursuit of environmental sustainability.

ASSA ABLOY can help you to reduce electronic locking energy consumption by 50% or more, through innovative solutions while improving safety and security.

This is achieved by preserving free movement across your campus while maintaining student safety through improved movement management and selecting the right solution for the applications. The ASSA ABLOY portfolio includes a comprehensive range of access control and locking systems to help achieve improved sustainability while maintaining student and staff safety.

Developing resource efficiency across campus facilities

Post pandemic, University campus communities require a more agile study and workplace environment.

The way we work, the environments and facilities we use have changed forever, and now our people and the buildings used also need to adapt to these changes.

A single building may now be required to service the needs previously provided by several and facilitate multiple users and community groups. These shared facilities may require a number of locking and access solutions all working together to deliver a seamless solution.

Developing new ways of sharing facilities and managing seamless access for all users is just one area where ASSA ABLOY can help improve campus operational efficiencies.

Improving the student experience

We understand the importance of the student experience is a key factor for a University when planning for the future. Helping students feel welcome and secure from the beginning of their time at University is a key objective and one where ASSA ABLOY can help.

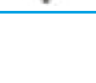

From receiving a request to install an app that provides access to the campus on arrivals day, that can be used to access parking facilities for Parents, as well as access to the student accommodation - offering a seamless joining process and the ability to get on with student life. The safe and secure environment gives comfort to family members that loved ones are in a place conducive to learning and positive life experience.

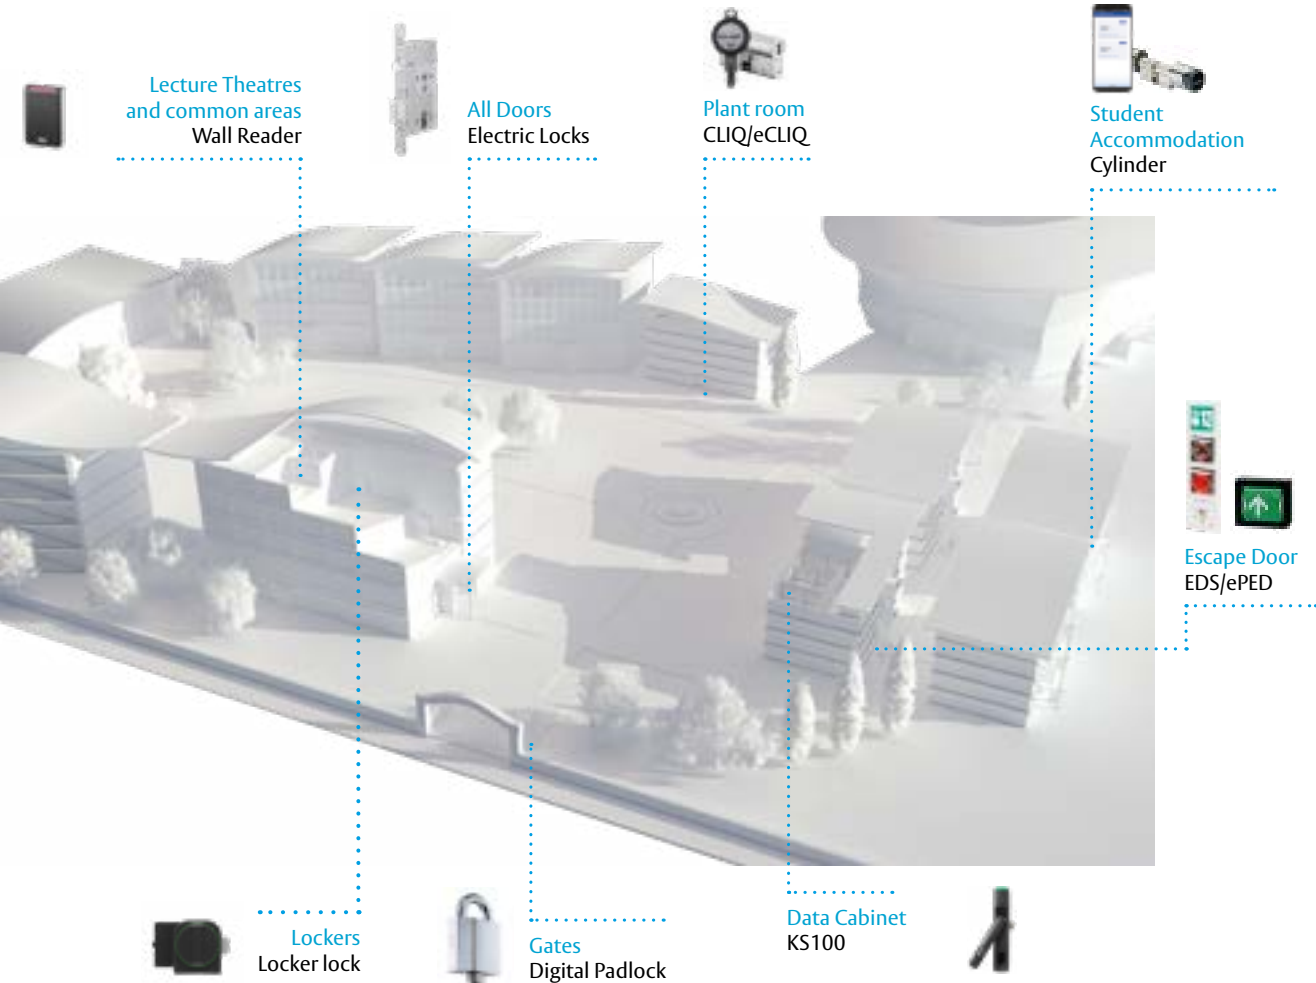

Imagine from the university's perspective the operational efficiencies and cost savings by not having to hand out keys. A solution integrated into the university's management systems to provide real time information regarding who has arrived and what accommodation space is still available, updates and room changes sent directly to the students mobile device.

Where our access control solutions can help you

Whether you want to install a completely new access and security system or upgrade your existing system, ASSA ABLOY has a comprehensive range of access control solutions to fulfil all your needs, in all areas, cost effectively.

Common Areas		Emergency and Temporary Situations		Restricted Areas	
Entrance doors		Lockdown		Offices	
Lecture Theatres		Preventing unauthorised entry		IT Infrastructure Hub	
Student Accommodation		Preventing unauthorised exit		Science and D&T prep. rooms	
Lifts				Chemical stores and cabinets and waste management	
Multi-use games areas				Server racks	
Lockers				Plant rooms	

How our access control solutions can help you

ASSA ABLOY offer a complete package of digital access control, electromechanical and mechanical locking systems to fulfil virtually any locking solution you need. A comprehensive security ecosystem: integratable, fire safety & escape compliant locking solutions to meet BS EN 179, BS EN 1125 and BS EN 13637, suitable for credentials including cards, fobs, mobile phones and keys.

Digital Access Solutions

We create adaptable products and easily installable systems to provide user-friendly, flexible access management with multiple credential options. Managers and approved administrators can specify individual access permissions to ensure only authorised access is permitted. You can monitor activity with full audit trails and manage required changes quickly and conveniently.

Mobile Credentials

Credentials to access areas, rooms and cabinets need to be closely controlled, but they also need to be convenient and practical. With ASSA ABLOY access control systems they only need a single credential to access all the areas they need via a mobile device such as a smartphone or smart watch.

Digital Key Systems

We live in a connected world that offers tremendous capabilities and opportunities, but it also creates new cyber security threats and challenges. ASSA ABLOY's digital key systems combine the benefits of digital technology, flexible access control and audit trails, and so much more, with the security of market leading, fully tested, resilient mechanical locks.

Electric Locks & Electric Strikes

Wired locking solutions such as electric locks and strikes are recommended for external doors and doors which require high security, such as offices, labs and IT hubs. These products are tested to fulfil UK and European fire and escape standards, helping you meet your regulatory requirements, as well as helping you implement a Lockdown situation.

ePED - Escape Door Systems

Escaping from a building can be a matter of life and death, but equally you may also need to prevent students leaving site without permission through emergency exits. Our ePED system is a specially designed compliant solution to ensure people can escape safely. Additionally ePED maintains building security in the event of an emergency and is your means of complying with BS EN 13637, the standard for electronically controlled door along escape routes.

Benefits

- We can help you meet all the safety and security requirements you encounter on a day to day basis
- Products and systems proven on university campuses and in student accommodation
- Convenient access for staff and students allowing freedom of movement within a safe and secure environment, enhancing the university experience
- Cost effective access control solution with virtually no disruption, as most products can be easily retrofitted
- If it's an upgrade you need, our systems will integrate with your existing system
- Access solutions can be designed to prevent unauthorised exit as well as entry to buildings and areas
- Better utilisation of space to achieve your corporate objectives
- Helps you meet your sustainability and social responsibility objectives

What we offer

- Expert advice from Education security specialists
- Continued support before, during, and after installation
- Product training to ensure a seamless transition to a new system
- Free onsite inspection and review services
- Free compliance training for maintenance and facilities teams

University Case Studies

University of St Andrews

The university has installed Aperio® wireless locks on around 1,700 student bedrooms. St Andrews takes its environmental footprint very seriously. Aperio battery-powered, wire-free electronic locks are a natural fit for their accommodation, and their sustainability objectives

The entire Halls of Residence estate will run Aperio®. The locking devices offer significant energy efficiency benefits. Locks are wireless, so they can be installed with little energy use and no need for a wired connection to mains electricity. They consume zero energy when idle and run on standard batteries, consuming little power in operation. Maintenance involves a change of battery every two years (approx.), nothing more. Through an entire life-cycle, Aperio® combines energy efficiency with cost effectiveness, convenience and full audit trail.

University of Birmingham

Chamberlain, based in Edgbaston, is a brand new student accommodation development comprised of a 21-storey tower and three low-rise blocks. The student rooms have been fitted with the Aperio® solution, which required full integration into the Gallagher Command Centre, which is an industry leading critical business platform, delivering organisational security and operational continuity.

University of Surrey

Starting with the new Reception building at the Manor Park Campus, ASSA ABLOY worked with WOT Security to upgrade the ARX access control system. The upgrade added over 40 Aperio® online access control units and ARX controllers, allowing the university to secure, monitor, and record access at the Manor Park site. The online connection to Aperio® doors allows university facilities managers to conduct real-time audits and update access permissions instantly.

Other Universities and colleges benefiting from our access solutions include:

- Kings College London
- University College London
- University of Liverpool
- University of Aberdeen
- East Anglia University
- Royal Holloway University of London
- Loreto College Manchester

The ASSA ABLOY Group is the global leader in access solutions. Every day, we help billions of people experience a more open world.

ASSA ABLOY
Opening Solutions

ASSA ABLOY Opening Solutions leads the development within door openings and products for access solutions in homes, businesses and institutions. Our offering includes doors, door and window hardware, locks, access control and service.
