An ASSA ABLOY Group brand **ASSA ABLOY**

ABLOY

How can you protect assets from today's security threats? Specify integrated locking solutions that combine maximum protection with smart system controls.

ABLOY's patented rotating disc technology is the most advanced mechanical locking system in the world. Designed with tough security features, it is far superior to locks based on spring and pin technology.

- Has almost 2 Million different key combinations under a single key profile. Lock keys cannot be duplicated.
- The disc controller structure requires a moving element in the key in order to function.
- Impossible to penetrate, resistant to physical attacks, and virtually pick & bump proof.

EL570

Electronic Door Locks

For interior and exterior doors of commercial premises, control rooms, data centers, and more. Well-suited for use with impulse control devices, i.e. card reader, keypad, timer or push button. Mechanical or electromechanical (CLIQ®) cylinders available. Meets all high-security ANSI standards.

CY416T

CY416T+CH015

Door Cylinders

Bump proof and pick proof, standard mortise cylinders, knob cylinders and mortice/rim cylinders are compatible with all mortise locks, rim locks and key-in-knob locks made according to ANSI standards. A variety of models available to replace existing cylinders with ABLOY mechanical and electro-mechanical (CLIQ®) cylinders.

The strongest locking system around is also the most flexible.

The electronic component of ABLOY PROTEC² CLIQ[®] adds smart and convenient access control technology to the locking system. It ensures greater accountability and reduces the risks posed by lost and stolen keys.

- Access control can be scheduled electronically with a web manager to specific facilities and updated with smartphone apps.
- Key usage is date and time-stamped for audit accountability.
- Electronics and battery contained within the base of the intelligent key. The wire-free system uses existing hardware, ensuring cost-efficient installation.

The Advantages of CLIQ

Robust and reliable locking system

Remote property and equipment security

CLIQ Web Manager

Administration

Certification

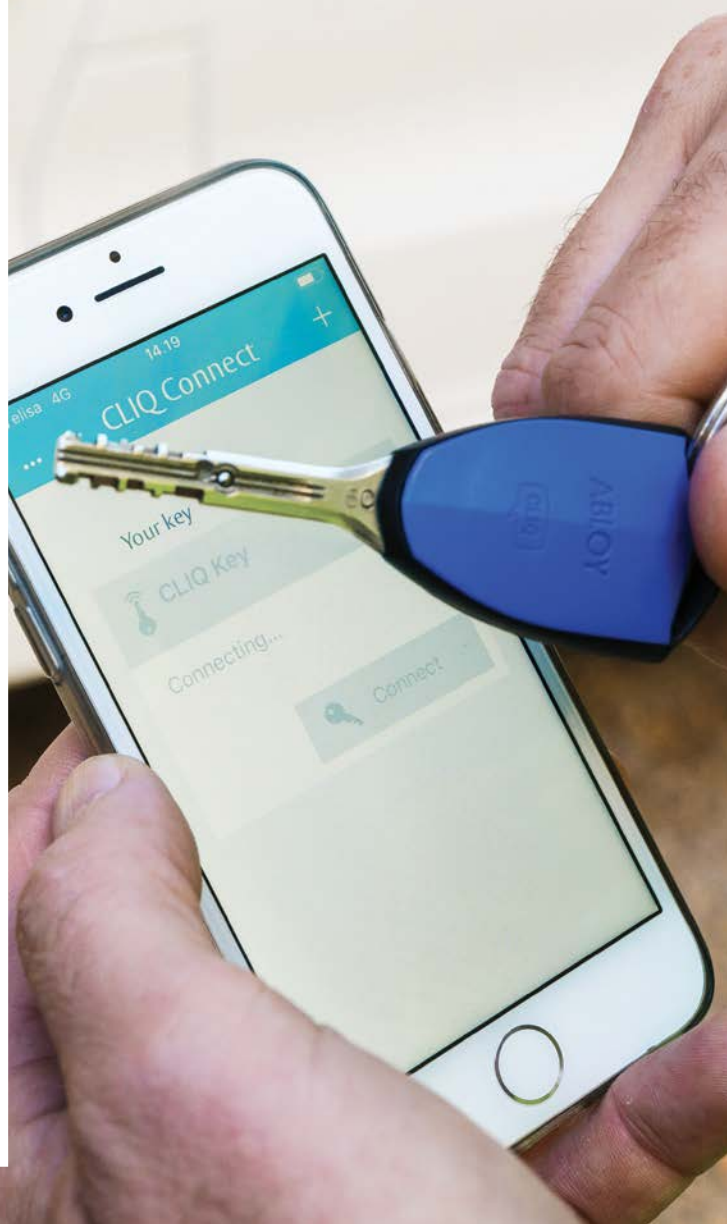

Scheduled access rights

Safety

Key management

ME153 **ME154**
c/LC801 c/LC802

Deadbolts

Designed to meet and surpass the highest global standards with case hardened steel cylinder housings, steel retaining screws, reinforced steel strike box, and a protective bolt shield. Meets ANSI deadbolt locks Grade 1 & 2 compliance. A variety of single and double mechanical and electromechanical cylinder models available.

Padlocks

Ideal for open, fenced facilities containing high risk or valuable equipment, repair yards, depots, distribution centers, substations, gas, water or electric facilities, etc. Available in brass, hardened steel, and super weatherproof models. Mechanical or electromechanical (CLIQ[®]) cylinders available.

ABLOY OY: A history of innovation in critical infrastructure protection.

Founded over 110 years ago, ABLOY OY is guided by a mission to help people feel safer and more secure. Collaboration with security managers, engineers, architects, and design teams has given Abloy a unique insight into the essential security product requirements of the nation's infrastructure, enabling us to develop locking products that operate in the most adverse of conditions and meet the most exacting industry standards.

Some of the world's most vital critical infrastructure facilities are protected by our systems. Case studies by industry available on request.
