

MUVE – the network of 11 museums in Venice

High-end security technology meets ancient cultural heritage

MUVE is a network of 11 museums located in the historical city center of Venice and in the Venetian Lagoon. It is one of the biggest cultural attractions in Italy with over two million visitors every year. It boasts an immense cultural heritage, with over 700,000 works of art, five specialist libraries, a photographic archive and a well-equipped warehouse in the Vega Stock in Marghera.

Starting point

When it comes to securing not only 700,000 works of art, but also hundreds of years old cultural-historical buildings in addition to delicate structure of ancient doors, it can be quite a challenge. When MUVE asked a solution to secure and ensure access management for all the 11 museums under their control, Abloy didn't hesitate to take on such an interesting and valuable project.

The challenge was to adapt the technical solution to the historical buildings and same time keep it usable and guarantee appropriate safety and security to MUVE's staff, visitors and collections. Having locks for over 200 or even 300 years old, the need was to ensure access management with audit trail and eliminate the huge amount of keys while respecting the old and delicate structure of the museum doors.

Solution

As a solution Abloy and MUVE ended up with a locking and access management system PROTEC² CLIQ™ which cylinder structure allows concealed installation. In this way, MUVE can have all the benefits of modern technology, one key principle, remote access management and possibility of audit trails without changing the appearance of the historic doors.

The project is a good example of how ABLOY products and solutions can be tailored to meet even the most challenging individual needs with careful design and seamless collaboration across Abloy's extensive network in over 90 countries. Whether it is a high-end modern environment or a cultural site that is hundreds of years old, the solution is always close.

"Everyone in MUVE have been enthusiastic about the system, because it has made their job, movement and managing access in the buildings easier. It is a very functional solution that combines together the highest elements of safety, with of course, our cultural heritage."

Lorenzo Palmisano
Security and Logistic Manager at MUVE

ABLOY solution

- PROTEC² CLIQ™

Benefits

- One key opens all the doors needed
- Improved efficiency and security
- Concealed installation
- Remote management of access rights
- Access rights based on time and work tasks
- Audit trail
