

**Type**

Historical monuments / Museums

**Location**

St.-Germain-en-Laye, France

[www.musee-mauricedenis.fr](http://www.musee-mauricedenis.fr)**Challenge**

The Maurice Denis museum houses one of the largest collections of works of art in the symbolist and post-impressionist style. The building itself is an architectural masterpiece.

The main challenge involved ensuring security for the museum without changing its aesthetics or architecture, and the works of art also needed to be protected, as did the offices, for confidentiality reasons.

**The project required**

- A high-security access management system that can be adapted to and integrated discreetly into the architecture of the premises
- Reliable and robust locking technology
- Elimination of key misuse
- An economical and cost-effective system that makes it easier for technical staff to carry out their daily duties

## Solution

70 PROTEC<sup>2</sup> CLIQ cylinders and padlocks were installed on the museum's doors and windows, both inside and outside, in addition to the weatherproof padlocks that were installed on the CCTV security cameras.

Thanks to their simple, wireless installation, the PROTEC<sup>2</sup> CLIQ cylinders easily fit alongside the museum's decor, while guaranteeing a high level of security. In addition, their resistance helps reduce the risk of attempted break-ins.

Access and control over entries and exits have been made easier with the PROTEC<sup>2</sup> CLIQ keys, thanks to the management of staff rights according to their schedules and functions.

Moreover, the number of keys has been considerably reduced. Internal staff can now access all doors in the building with a single key. As for external personnel, they can retrieve PROTEC<sup>2</sup> CLIQ keys programmed according to their working hours from TRAKA lockers with combination locks.

**"PROTEC<sup>2</sup> CLIQ enables control over all openings with a single key, including doors, windows, cabinets, and so on. This saves a considerable amount of time and money."**

**Raphaël Scapecchi, Head of security**  
Musée Maurice Denis

## ABLOY solution

- 70 PROTEC<sup>2</sup> CLIQ cylinders & padlocks
- 40 PROTEC<sup>2</sup> CLIQ keys
- 3 PROTEC<sup>2</sup> CLIQ update & programming devices
