

ABLOY x TESI

In cooperation for more sustainable and secure solutions beyond industry standards

TESI Tecnologia & Sicurezza

TESI Tecnologia & Sicurezza is an Italian company founded in 2005. Providing innovative security solutions and expertise for large national and international banks, authorities, airports, and jewelry, TESI has strong experience working in the most challenging high security environments.

Starting point

When operating in the premium security environments, it's essential to offer solutions combining essential functionalities with physical durability and tampering proofing.

In order to meet customers' constantly growing security and technology needs, TESI was looking for a partner with global experience in premium security and access solutions.

Solution

When the cooperation with Abloy and TESI started in 2015, the first joint project was implemented with a large Italian banking group utilizing ABLOY Electric Locks technology.

The solution was built around TESI semi-circular door Gemma, equipped with ABLOY Motor Lock enabling to provide the customer with a door system including integrated locking. Collaboration continued with development of a RC4 certified high security glazed door Minerva for emergency exits. Low power consumption is one of the ABLOY Motor Locks benefits. When used together with Hermeta, a security glass door certified for escape routes, it is an energy efficient and sustainable choice.

The result of cooperation is not only products that meet safety classifications, but new, even more innovative and sustainable solutions that set a new standard in the field. While the world and customer needs continue to evolve, the search for new synergies continues and implementations and technical solutions are already planned for the future.

"Our future is geared towards maximising security, energy efficiency features, and eco-sustainability levels as a result of new technological developments and studies. We consider collaboration with Abloy essential to achieve these objectives."

Fabio Bianchi
CEO of TESI

ABLOY solutions

ABLOY Electric Locks, Exit Devices, Cylinders, Door Closers and other supplementary hardware

Benefits

- High security for demanding environments – premium level of security
- Safety in emergencies and everyday life
- Reliability, compatibility and integration capability
- Physical durability and tampering proofing
- Sustainability and energy-efficiency
- Sharing knowledge and expertise to improve customer satisfaction
- Tailor-made solutions beyond current regulations and industry standards
